DAACS Summary Report

Diagnostic Assessment & Achievement of College Skills

OVERALL RESULTS

- Self-Regulated Learning
- Writing
- Mathematics
- Reading

SELF-REGULATED LEARNING

Completion Date: March 18, 2024

- Motivation
- Strategies
- Metacognition
- Self-Efficacy

WRITING

Completion Date: March 21, 2024

- Content
- Organization
- Paragraphs
- Sentences
- Conventions

MATHEMATICS

Completion Date: March 19, 2024

- Geometry
- Lines And Functions
- Number And Calculation
- Statistics
- Variables And Equations
- Word Problems

READING

Completion Date: March 19, 2024

- Structure
- Inference
- Language
- Purpose
- Ideas

Results for each assessment and domain are listed on the left-hand side of this page. You can access your complete results at https://umgc.daacs.net, or click on any domain for more detailed feedback. Below are some resources and tips that can help you be more prepared for college. You can also consider scheduling an appointment with a tutor: umgc.edu/current-students/learning-resources/tutoring/undergraduate-tutoring

Self-Regulated Learning

- See the last page of this document for specific tips you can start using right away.
- For more tips visit the Self-Regulated Learning Lab: srl.daacs.net
- Check out these learner support videos for tips on how to be a successful student: umgc.edu/current-students/learning-resources/learner-support-videos

Writing

- Visit the Online Writing Lab for tips on improving your writing skills: owl.excelsior.edu
- Schedule an appointment at the Effective Writing Center to receive assistance with your writing: umgc.edu/current-students/learning-resources/writing-center
- Check out the resources available at the UMGC library that can assist you with writing and citing: libguides.umgc.edu/gethelp/writing-citing

Mathematics

- Review the questions you answered incorrectly at umgc.daacs.net, and read the explanations for the correct answers by clicking “More Info” for each question within DAACS.

Reading

- Review the questions you answered incorrectly at umgc.daacs.net, and read the explanations for the correct answers by clicking “More Info” for each question within DAACS.
- Visit the Online Reading Lab for tips on improving your reading skills: owl.excelsior.edu/orc
- View the resources that are available at the UMGC library: libguides.umgc.edu/home

ESSAY

My self-regulated learning results concluded mixed levels of self-efficacy, metacognition, motivation, and strategies. Self-efficacy and strategies had the highest scores, while metacognition and motivation were the lowest. Observing my feedback implied that my learning skills are efficient with and high confidence to complete a task. All the subjects I have a high confidence, but the results waver. It shows that other traits can be improved. Additionally, it implied that if I can fix one issue, it can easily alleviate another issue. Understanding these issues can benefit me in the future when I encounter them again. The results showcased what I need to innovate to keep the skills updated. Moreover, my lack of knowledge in metacognition and motivation is what I am committed to improve in this term.

For the time being, what is interesting about the results is how it organized each case by best to worst. For instance, the excellent scores showcased a variety of challenging subjects I may handle. Some of the courses allow me to learn different reading techniques. I can research easily and analyze the writing structure. However, I have trouble creating a proper summary with correct main ideas. I also struggle with writing a proper format with correct citations. Not learning to write it properly as well with citations means that my reading skills are good but, I need to improve on my writing skills. Additionally, I am good at mathematics. I struggle in a few places but do well in college algebra and pre-calculus. The results showed that I do well in solving problems and tackling head on solutions. For these instances, implies that I do well in self-efficacy and strategy formulation. It is hard to find a balance for my flaws while finding the correct method to solve the issue. However, I have found a few ways that the results diagnosed me to improve both of those issues.

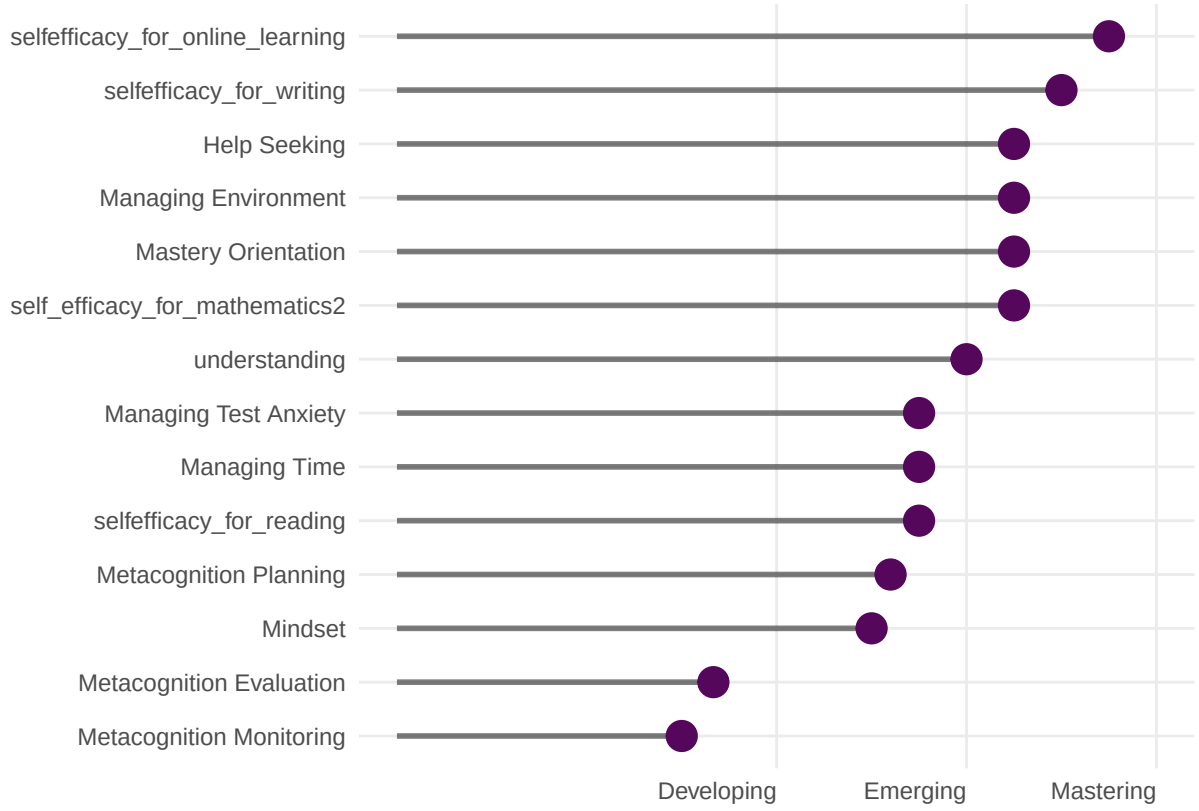

One of the ways I can improve my metacognition is through organization. I have a few good experiences on doing well for multitasking. I can write CRAC easily while researching legal cases. I am able to retain prior knowledge of my previous courses as I uses sources to recap on that information. I do very well in finding sources so that I am practice them before an exam. When I practice, it allows me to retain a longer memory of a specific subject. Additionally, I need to improve preparing for exams. So far, I can accomplish better scores by planning correctly before an exam. By studying with short sessions every day of the week, it can allow me to retain the knowledge of what I learned. I tend to do short term memory which is why the results showed that my metacognition is weak. Most of the time, I make sure to elaborate on important information so that my quiet study session is meaningful. If a concept is ambiguous to comprehend, I seek assistance through other sources. To improve, I must innovate inquiries so that I can monitor my long-term comprehension skills to keep control. And so, this is one of the ways I can do to improve my metacognition skills.

Nevertheless, even though I solved the metacognition issue, I need to improve on other methods to handle anxiety. I can do this by changing my mind set. Instead of thinking negatively, I can start by thinking more positively. If I keep on being negative, it will promote a lower self-esteem and motivation to continue learning. By being more positive, I will be more motivated to learn. If I am able to enjoy learning, then I can continue doing assignments at ease. Additionally, I tend to finish my assignments better when I am calmer. Anxiety in general, demotivates me and is one of the causations of falling behind in school. I avoid this issue by learning to organize my schedule properly. I can do this by taking breaks and prioritizing other activities. A great analogy of this is the big rock video where it shows all the important things you do throughout the day. As the day stacks up you have less space to fill up more rocks. Those outside rocks become your desires that cannot be fulfilled. To improve, I must also swap out activities to replace it with others every now and then to promote a healthier lifestyle. By lowering my anxiety with a better control, I can achieve a healthier mindset and improve my motivation to learn. And so, I can solve the motivation and anxiety issues through this method.

Furthermore, by learning how to achieve metacognition better can assist with developing a positive mindset and lowering anxiety. I may also utilize better planning skills so that I can maintain a healthier mind set and time to perceive my failures as a growing process. I can make my long-term comprehension skills better by creating better study methods. For instance, breaking down the subject and studying small parts of it every day. It might look useless, but it helps prevent cramming before the exam. I can also achieve this through organizational skills. If I can organize it properly, then my anxiety will be lowered and increase my motivation to learn. Sometimes learning to put aside distractions can stimulate better quality time on

studying. Fulfilling these two requirements, allows innovations of a growth mindset instead of a fixed version. While it is good to have a growing mindset, it is considerate to understand a fixed mindset. A growing mindset will allow me to achieve better metacognition and motivation skills. As for the other traits, I need to balance it so that I am able to achieve success in my life. Therefore, I will be learning to improve my metacognition with a growing mindset technique to achieve an overall healthier lifestyle.

SELF-REGULATED LEARNING

Here are three areas of self-regulated learning that you might want to work on, along with tips you can start using right away. Click on any of the areas of SRL in the text below to learn more.

Evaluation

- As you work on an assignment, ask yourself "Am I learning what I am supposed to?"
- After you complete an assignment, ask yourself, "What was the most important thing I learned?" and "What can I do better next time?"
- Keep a list of learning strategies that seem to work best for you.

Managing Test Anxiety

- Use relaxation techniques to reduce uncomfortable feelings and to increase your focus, as needed.
- Say positive things to yourself about your likelihood of success.
- Create schedules and plan study times so you don't get anxious about being able to do what needs to be done.

Mindset

- Think of a challenge as an opportunity to learn rather than something to overcome.
- View mistakes as a natural part of learning.
- Pay attention to the things you say to yourself. Remind yourself that you can improve if you just keep trying.
